

Pfungstadt, May, 16th 2013

ONLINE - and in practical use.

IOM and the VEPRO AG have launched a nationwide teleradiology project in Pakistan.

The **International Organization for Migration (IOM)** is a charity that operational assistance programs for migrants at national and international level.

It has been founded in 1951 with the aim to support an orderly and humane migration of people worldwide. Today the organization counts 149 Member States.

To meet its goals there, IOM Pakistan seeks high-quality and comprehensive health care for migrants and mobile populations. This includes in particular the program for tuberculosis screening.

Dr. Zeljko Pavlovic, Chief Migration Health Officer for IOM Mission in Pakistan, have had the vision of a teleradiology solution while also integrating the various rural outposts in the 160 million population country. In particular and of course this applies to the capital Islamabad. What was missing was a company that not only had the necessary technologies and skills, but also was willing to take on the local conditions and challenges.

During a professional presentation of the German VEPRO AG and the presentation of successful projects Dr. Zeljko Pavlovic realized, that he had found the long sought-after partner for the realization of his vision. Following an exchange between Dr. Pavlovic and senior staff from the VEPRO AG, Pavlovic was decided to set up a project team from both companies and under his general direction and supervision.

"The results we achieved together with the VEPRO AG, have not only fulfilled my vision and my expectations. The valuable expertise of VEPRO AG has helped to achieve a tremendous value to our projects." This is the summary of Dr. Pavlovic after only one and a half year implementation phase.

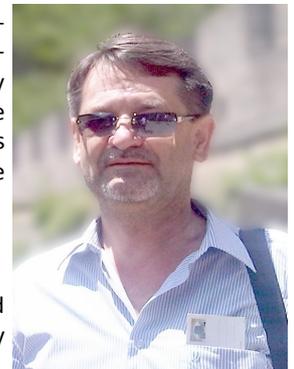

Dr. Zeljko was supported by Mr. Abdul Rehman, a close associate, who has more than 15 years of successful experience in the analysis, development and implementation of IT projects.

Abdul Rehman IT-Services

The precise analysis of the actual state and the constant adaptation of workflows have ultimately led to the highest technological standard for teleradiology solutions of the IOM project in Pakistan. The centralized solution, flexibly adapted to the remotest regions of the country, now provides the reliable results which are needed by people which are willing to emigrate abroad. This locally based medical services saves time and money, and not at least the assumption of risks to life and limb.

This first implementation of the "VEPRO Health Portal" in Pakistan, supported by a technical fail-safe concept, is an amazing example of how intelligently designed cloud solutions can support an emerging market. Even in the remotest areas, physicians and radiologists are now supported by this VHP Solution.

Dr. Zeljko Pavlovic

Assisted by Dr. Pavlovic, VEPRO AG has taken another step forward towards its vision of a "Global Patient Portal". New project inquiries from all over the world are an obvious signal for a rising customer acceptance and the strength of the "VEPRO Health Portal" solution - VHP.

About VEPRO AG Germany

VEPRO AG is a leading international healthcare company with its own product and software development, "Made in Germany". With over 30 years of national and international presence in the solutions business, VEPRO AG is one of the most experienced providers in the healthcare industry.

The aim of the VEPRO concept is cost minimization in the hospital and hospital administration while optimizing patient care. This is achieved through a wide range of processes to improve the archiving of image, film and health report data. All information is available via internal networks, but also in external networks (cloud) within seconds.

Worldwide with its own subsidiaries or affiliates more than 4,000 clients are served around the clock. The company is headquartered in Pfungstadt near Frankfurt (Germany).
