

VEPRO eHEALTH Solutions

WEBstudio convinces with exciting possibilities and forward-looking ideas

On 01. and 02. February VEPRO WEBstudio was presented for the first time in the context of our customer workshop. National and international partners and customers were shown new amazing possibilities to revolutionize their everyday life in hospitals or practices.

Our working world will change significantly in the next 10 years! The digitalization and the „Internet of things“, create more and more new ways and possibilities and redesign our working conditions. This also opens up exciting new options in the medical field.

When media praise it as a technical innovation, when a smartphone is only 6.4 mm thick instead of 6.8 mm or has a frameless display, WebStudio can confidently be described as a revolution in the future of working in medical everyday life:

„No matter where I am, no matter what IT device or program I want to work with - I always have the infinite freedom from anywhere to do what I want, when I want it“.

WEBstudio is a construction package full of possibilities with which you can create personal ideas for new working models and new organisational forms.

Each user creates his own personal concept how to use WebStudio. WEBstudio does not dictate what the daily work routine in cardiology or radiology will look like tomorrow - but there are possibilities. Which of these are used by medical staff is up to each individual to decide.

The workshop showed all participants the different WEBstudio Use-Cases, e.g. how to use online teleradiology, cross-location workflows, outsourcing - teamwork - home office etc. to make your personal working environment more economical, but also how patients benefit from it. How to use e.g. online teleradiology, cross-location workflows, outsourcing - teamwork - home office, etc. to create your own personal working environment.

WEBstudio turns the doctor or assistant himself into a pioneer, a new individual but also highly efficient way of working.
