## VEPRO AG Germany - Successful in Vietnam

*The "Central Hospital" from Hue City has chosen the PACS and workflow solution from VEPRO*

The "Hue Central Hospital" with its 2,800 beds is one of the top three "Super Hospitals" of Vietnam. In those 63 hospitals and seven Health Centers they take care for approx. 545,000 patients and carry out round about 30,000 surgeries per year. This tasks are done from more than 1,600 medical staff, including approximately 450 physicians. In addition to its function as a Medical Specialist Center for Central Vietnam, the "Hue Central Hospital" is also the Medical University for both Vietnamese and foreign doctors.

VEPRO AG Germany supports the "Hue Central Hospital" in achieving the future objectives:

- Applying the medical knowledge by using modern diagnosis and therapy.
- Establishing effective and efficient information and communication technology for the purpose of improving the operational and medical services.
- Expansion of medical education and training for the purpose of improved quality of care in Central Vietnam.

For the first step, the integration of an "Enterprise PACS and Workflow Management System", the "VEPRO EMR Manager" will be carried out. Thus the two great departments of Radiology, Radiotherapy and Cardiology and the Emergency Room are equipped with a highly modern VEPRO PACS for the acquisition of images and sequences, as well as for storage and diagnostics.

In addition, the integrated "VEPRO Information System VIS" supports the whole workflow management in the patient admission supports resource planning and documentation of services provided and also the findings.

### About VEPRO AG Germany

VEPRO AG is a leading international healthcare company with its own product and software development, "Made in Germany". With over 30 years of national and international presence in the solutions business, VEPRO AG is one of the most experienced providers in the healthcare industry.

The aim of the VEPRO concept is cost minimization in the hospital and hospital administration while optimizing patient care. This is achieved through a wide range of processes to improve the archiving of image, film and health report data. All information is available via internal networks, but also in external networks (cloud) within seconds.

Worldwide with its own subsidiaries or affiliates more than 4,000 clients are served around the clock. The company is headquartered in Pfungstadt near Frankfurt (Germany).
